Client Debriefing Checklist

Client Debriefing Checklist

After using Rise during the simulator session, please consider using TEV insights to debrief crew with below checklist.

Client Debriefing Checklist	
	Ensure you "End Session" if not done already.
	As required, manage timeline properly to capture maneuvers under the correct crew member using the blue lines.
	If pertinent and adds value to training, select a few insights you could use during debriefing to trigger facilitative discussions.
	Remember TEV cannot monitor flying techniques, it provides objective insights to be interpreted within context by the instructor.
	With the objective of finding root cause of any crew error, frame selected insights in the context of TEM.
	Discuss pilot competencies and observable behaviors that were a factor in selected insights.
	Consider lapses in crew's reaction to anticipate/mitigate an incoming threat, correct an error or recover from a loss of safety margins.
	Your grading should consider both the outcome (What) and the root cause (Why). Insights can clarify what happened with clients.
	Keep in mind maneuvers are vehicles to train CRM, SOPs and soft skills/competencies.
	Consider using TEV insights to highlight good performance in context of TEM.

CAE Rise in TEM Context

To find out more about CAE Rise in the TEM context for PC, refer to the following graphic.
