Creating a Module

Creating a Module

Modules function just like lessons, however, modules are created for a specific customer who requires a predetermined set of tasks and compliance. To create modules, you will need to select the tasks that the customer's trainees must complete in order to meet the proper standard.

To learn more about creating modules, refer to the information below.

The screenshot shows the CAERise Editor interface. At the top, there is a navigation bar with 'CAERise Editor' on the left and 'LR' on the right. Below this is a sidebar with 'Dashboard' and 'Courses' options. The main area is titled 'Modules' and shows '57 of 57 Modules' with a 'CREATE MODULE' button. Two modal windows are overlaid on the main content. The first modal, 'Create Module', has fields for 'Module Name' (Test Module 001), 'Aircraft Type' (A300), 'Customer' (Aramco Associated Company (Part 125)), and 'Module Type' (Classroom/Simulator). The second modal, 'Create Lesson', has a 'Lesson Name' field (Test 001) and 'Session Type' options (Classroom/Simulator). Both modals have 'CANCEL' and 'CREATE' buttons.

1 CREATE MODULE Button

To create a module, click on the **CREATE MODULE** button.

4 Customer

Select the customer for which this module will be created.

7 CREATE Button

Click on the **CREATE** button to create the lesson.

2 Module Name

This will open a window where you will need to enter a module name and select an aircraft type, customer and module type.

5 Classroom

Select the classroom module type for modules that will take place in a classroom.

3 Aircraft Type

Select the aircraft type from the drop-down list.

6 Simulator

Select the simulator module type for modules that will take place in a simulator.

8 New Module

Once you've clicked the **CREATE** button, you'll be able to see your newly created module at the top of the list.

9 Draft Status

You'll also notice that the module status will remain in Draft until it is edited and submitted for approval.
